

Installing of your new Tubular Cam Locks step by step

Step 1: Remove the existing Cam Lock. Remove the large mounting nut with a 7/8" deep socket or open ended wrench. Please note sometimes the threads on the locks become fouled so you might have to spray lubrications on the threads to help in removing the mounting nut.

Step 2: Push the lock through/out. Please note there may be a rubber or synthetic gasket underneath the lock bezel. Remove the gasket, your need to use it for your new Tubular Cam locks.

Step 3: Reinstall the lock gasket if needed. Insert the new Cam lock with the cam off (locking arm) (Be Extremely cautious not to lose the governor) into the hole and tighten the mounting nut into place. Do not over tighten, as your RV storage compartment door may not be made of a solid material.

Step 4: Install the cam (locking arm). Do not over tighten the cam nut. Over tightening may bind the lock.

Step 5: Check the rotation before closing the compartment door. If the rotation is not correct you have to remove the cam and turn the governor over.

IMPORTANT NOTICE PLEASE NOTE

Your order was shipped with any extra service key (uncovered). Tubular locks can at times "Jump" out of alignment. Should your lock "Jump" simply insert the service key into the lock and turn the key to its correct location. We recommend that you use this service key only if your lock should Jump out of position.

Industrial Lock and Hardware recommends lubricating your tubular locks 3 to 4 times a year with Dri-Film Lubricant (SuperLube) manufactured by Synco.

INDUSTRIAL LOCK & HARDWARE, INC.

If you store your tools, hitch accessories, or any thing that has some value in the exterior storage compartments, as we're sure you do, there could be a problem. Thousands of people, good and bad have a key to your locks.

Perhaps up to 60% of all travel trailers have been manufactured using the CH751 or ES201 keyed locks on their storage compartment doors. Don't believe that's true? Well look at your storage compartment keys, do they have a CH751 or ES201 stamped on them? If they do, try opening a few different RVs that are parked in your storage lot or campground just to see if your key works in their RV – chances are IT WILL! And please don't think criminals don't know this. THEY DO.

High Security Tubular Locks from Industrial Lock & Hardware are manufactured to your requirements. With over 10,000 key codes available we guarantee that we will not duplicate your key code (in your geographical area) period. The pricing of our locks start at \$8.56 which includes the cam and key. All of our locks can be keyed alike regardless of size. (So if your travel trailer has 2 or more sizes of locks we can make them all with the same key).

Industrial Lock & Hardware Inc. has been manufacturing High Security Cam locks, Pad locks and specialty products for 15 years. Industrial Lock & Hardware Inc. places its emphasis is on service and quality.
